DETAILED ACTION

Claim Objections

Claim 2 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. The magnetic plate being circular is covered by claim 1.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 5-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Eiji (JP 07-039638).

Regarding claim 5, Eiji discloses a hockey table having a main body 5, a panel 13, magnetic blocks 14 each mounted on a top surface of the panel, a disk 16 movably mounted on the panel, and a magnetic plate 23 mounted on a bottom of the disk and rested on the magnetic blocks (See Figures 1-9).

Regarding claim 6, Eiji discloses the magnetic plate being circular (See Paragraph 0030 and Figures 6, 8, and 9).

Regarding claim 7, Eiji discloses a loop-shaped boundary frame mounted on a periphery of the main body (See Figure 1).

Regarding claim 8, Eiji discloses the top of the panel having a plurality of recesses to receive the magnetic blocks (See Figure 2).

Regarding claim 9, Eiji discloses the magnetic plate with a contact face having a polarity the same as that of the contact face of the magnets in the panel (See Abstract).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eiji (JP 07-039638).

Regarding claims 1 and 2, Eiji discloses a hockey playing table comprising a main body **5**, a panel **13** mounted on the main body, a plurality of magnets **14** mounted in recesses on the panel, a disk **16** movably mounted on the surface of the panel, wherein the disk comprises a circular magnetic plate on a bottom thereof and the bottom of the disk rests on the surface of the panel (See paragraph 0030 and Figures 1-9). Eiji discloses a laminate covering the plurality magnets and the panel in order to give a decorative appearance (See Paragraph 0014). Eiji also submits that the disk floats above the surface of the laminate. One having ordinary skill in the art would have found it obvious to omit the laminate from the panel if the decorative appearance is not desired. It is noted applicant claim does not exclude the use of a decorative panel. Furthermore, applicant does not disclose why a magnetic board is critical to attain the

invention when applicant has submitted that a plurality of magnets can achieve the same goal. One having ordinary skill in the art would have drawn therefrom Eiji that any type of magnetic surface such as a panel surface would be sufficient so long as the disk floats about the surface of the table.

Regarding claim 3, Eiji discloses a loop-shaped boundary frame mounted on a periphery of the main body (See Figure 1).

Regarding claim 4, Eiji discloses the magnetic plate with a contact face having a polarity the same as that of the contact face of the magnets in the panel (See Abstract).
